

Product Backlog

Next version

In the following table the features for the next version are gathered. At some point the decision which will become part of V 2.0 will be made and the table splitted. For complicated features a separate (linked) page should be added and link to the page entered in the below table.

Feature	Priority	ShortDescription
ConfigurableErrorTolerance	Low	An object should be able to configure how errors are handled (Example: does an error in @BeforeConfiguration annotated method stops the configuration or can ConfigurationManager ignore it).
More Formats	Low	Currently JSON is the only source format we understand. Xml and properties could be added for 'old-style' developers, yaml/groovy for 'modern' people.
RemoteConfigServer	High	A RemoteConfigServer to be used instead of files
Introspection	High	A possibility to retrieve all known configurations and all known environment
