

# Finally 98% and more

The unit-test coverage is finally high enough for me to stop. Even to reach this value I had to test for impossible things and started to seriously hate [EclEmma](#). But more is really impossible. Well 98% is good enough for me 😊

I hope I will never do things like that again:

```
@Test public void testSingleton(){
    assertEquals("Only one instance allowed", 1, ConfigurationManager.values().length);
    assertEquals(ConfigurationManager.INSTANCE, ConfigurationManager.valueOf("INSTANCE"));
}
```

Well, on the other hand... it has been fun 😊
